Example 4; Fig 9; 119pp; Japanese.

The present sequence is provided in a specification relating to a protein or its salt with an amino acid sequence identical or substantially similar to a fully defined sequence of 393 amino acids as given in the specification. The protein is useful in gene diagnosis and development of preventives and remedies for diseases associated with dysfunction of the protein, e.g. Alzheimer's disease, hypertension, anorexia, allergy, angina pectoris and infections (e.g. multiple resistant Staphylococcus aureus. The proteins and DNA encoding the proteins are also useful for

The invention comprises a method of producing a target peptide. The C-terminal end of the target peptide is fubed via a protease-susceptible linker to parathyroid hormone (PTH) residues 1-34. The method of the invention is useful for the clean and efficient production of a target peptide at a high expression rate on an industrial scale without the need protence the N-terminal methionine from the product. The peptides produced by the method of the invention are suitable for pharmaceutical and other uses. The present protein sequence was used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Production of target peptide comprises cleavage of fusion peptide with parathyroid hormone peptide for efficient manufacture of target peptide without the need to remove N-terminal methionine.
                                                                                                                                                                                                                                 Target peptide production; fusion peptide; protease-susceptible linker; parathyroid hormone; PTH; high expression rate;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  proteins. The method comprises preparing a recombinant vector for transforming a host cell before culturing the obtained transformant, assaying expression of the reporter gene and confirming high expression of the recombinant proteins are useful as drugs, reagents, raw materials for industries and feeding stuffs. Also, the proteins are obtainable on large-scale production. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Production of recombinant proteins in prokaryotes or eukaryotes particularly with target proteins obtainable through gene recombination technique, for use as drugs, reagents, raw materials for industries and

                                                                                                                                                                                                                                                                                                                               ð
                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                             The invention comprises a method for producing an active peptide that has the same activity as a ZAQ ligand isolated from eukaryotic cells. The method of the invention is useful for the production of a physiologically -active ZAQ ligand for use in preventing or treating digestive diseases (e.g. colitis and diarrhea). The present amino acid sequence represents a human physiologically active ZAQ ligand-related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  G protein-coupled receptor; ZAQ ligand; physiologically active peptide; ZAQ; antidiarrheic; laxative; drug development; digestive disease; colitis; diarrhoea; constipation; poor-absorption syndrome; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                      9

The present invention describes a peptide containing an amino acid sequence (I) identical to or substantially similar to that of the sequences in ABB06305 or ABB06306, or its salt. (I) has antidiarrheic an laxative activities. The peptides and encoding DNAs from the present invention are useful for developing drugs to treat digestive diseases like colitis, diarrhoea, constipation and poor-absorption syndrome, including gene therapy. The physiologically-active cows milk-originated peptides are applicable as a specific ligand of brain-originated orphan protein-coupled receptor protein ZAQ. ABL49615 to ABB40659 and ABB06303 to ABB06315 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 AVITGACERDVQCGAGTCCAISLWLRGLRMCTPLGREGEECHPGSHKVPFFRKRKHHTCP

                                           gastrointestinal smooth muscle contraction, useful for improving impaired gastrointestinal motility in irritable bowel syndrome, chronic
                                                                                                         The invention relates to human prokineticin 1 and 2 polypeptides that stimulate gastrointestinal smooth muscle contraction and nucleic acid molecules encoding such polypeptides. Polypeptides of the invention are useful for treating disorders involving impaired gastrointestinal motility. They are useful for stimulating gastrointestinal motility in disorders such as irritable bowel syndrome, diabetic gastroparseis, postoperational ileus, chronic constipation and gastrointestinal reflux disease. The prokineticin antagonists are useful for inhibiting gastrointestinal motility in conditions of diarrhoea, malabsorptive disorders, inflammatory bowel disorders, infectious diseases and intestinal cancers. The antagonists also act as analgesics. The present

The invention relates to a method of screening for a compound for its ability to modulate circadian rhythm. The method involved determining the ability of a prokineticin 2 (PR2) receptor agonist or antagonist to modulate one or more indicia or circadian rhythm function. The compound is identified as being a PR2 receptor agonist or antagonist by determining its effect on a predetermined signal such as calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; prokineticin 1; PK1; circadian rhythm; modulation; drug screening; circadian rhythm disorder; non-24-hour sleep-wake syndrome; rapid time-zone change syndrome; jetlag; work-shift syndrome; delayed phase sleep syndrome; advanced sleep phase syndrome; irregular sleep-wake pattern syndrome; decreased amplitude syndrome; hunger; infardian rhythm; dashee shull keceptivity; CNS; central nervous syndrome; PK2 receptor ahtagonist; PK2 receptor agonist.
The invention relates to a novel angiogenesis inhibitor comprising a compound that inhibits the activity of an amino acid sequence given in the specification. Angiogenesis-related proteins BN9, ZAQ and ISE were utilised within the method of the invention. The molecules of the invention demonstrate cytostatic and antiinflammatory activities whilst the method may be useful for treatment and prevention of cancer, ovarian diseases, diabetic retinopathy and inflammatory disease. The current sequence is that of the human ZAQ-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seasonal disorders, comprises determining ability of prokineticin-2 receptor antagonist or agonist to modulate one or more circadian rhythm

mobilisation produced by the interaction of PK2 and a receptor selected from the PK2 receptor (e.g., AD005353) or the PK1 receptor (e.g., AD005353) or the PK1 receptor (e.g., AD005355). The invention is based on the findings that PK2 expression in the suprachiasmatic nucleus (SCN) oscillates in a circadian fashion, and that PK2 receptor activation modulates circadian rhythm in rats. The correction also relates to a method of modulating the circadian rhythm of an animal by administration of a PK2 receptor antagonist or agonist; a composition comprising a detectably labelled PK2 and an isolated mouse PK2 gene promoter (AD005365-AD005369) operably linked to a heterologous nucleotide sequence; use of such constructs to identify modulators of circadian rhythm and for the light regulated expression of a nucleic acid concerned expression of a nucleic acid molecule in an animal; and oligonucleotides at least 17 bases in length which are able to hybridise to the human PK2 promoter AD005365. The concerned of a nucleic acid modulating circadian rhythm modulators may be used in the treatment of circadian rhythm disorders such include PK2 receptor agonists which promote sleep, and PK2 receptor agonists which promote concerned sleep, work-shift syndrome, disorders such as non-24-hour aleep-wake syndrome, advanced sleep phase syndrome, irregular sleep wake concerned sleep phase syndrome, and associated with decreased amplitude, and expected as a seconal affective disorder. They may also be used for modulating concerned beingolar hythoms with a periodicity of more than 24 hours (infardian rhythm) such as daydreaming, urination or hunger, or those with a periodicity (human pk).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               neurogenesis; prokineticin receptor; PKR; neural stem; progenitor cell; neural regeneration; Alzheimer's disease; Parkinson's disease; neurodegenerative disease; prokineticin 1; PKI.

The specification describes a method for identifying a compound that modulates neurogenesis. The method comprises providing a compound that modulates prokineticin receptor (PKR) signaling, contacting a neural stem or progenitor cell with the compound, and determining the ability of the compound to modulate neurogenesis. The method is useful for modulating neurogenesis or for identifying compounds that modulate neurogenesis. These are used for both ex vivo or in vivo therapeutic applications where neural regeneration is desirable, such as in Alzheimer's disease or other debilitating neurodegenerative diseases. The present sequence represents human prokineticin 1 (PKI), which may be used in the method of the invention to modulate neurogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antiangiogenic; antialcoholic; antiarrhythmic; antiarteriosclerotic; anticonvulsant; antidepressant; antidiabetic; anti-HIV; antimanic; antiparkinsonian; cerebroprotective; cytostatic; eating disorders; endocrinic; gastrointestinal; gynecological; hypototic; hypotensive; neuroprotective; nootropic; ophthalmological; tranquilizer; vasotropic; vulnerary; monoclonal antibody; human; ZAQL-1; ligand; hybridoma cell; assay; diagnosis; endométrial cancer; endometriosis; ovulation disorder; digestive disease; angiogenesis; pregnancy; eating disorder; aleeping disorder; seasonal depression; reproductive dysfunction; endocrine disease; senile dementia;

The invention relates to human prokineticin 1 and 2 polypeptides that stimulate gastrointestinal smooth muscle contraction and nucleic acid molecules encoding such polypeptides. Polypeptides of the invention are useful for treating disorders involving impaired gastrointestinal motility. They are useful for stimulating gastrointestinal motility in disorders such as irritable bowel syndrome, diabetic gastroparesis, postoperational ileus, chronic constipation and gastrointestinal reflux disease. The prokineticin antagonists are useful for inhibiting disorders inflammatory bowel disorders, infletious diseases and intestinal cancers. The antagonists also act as analgesics. The present
                                                                                                                                    New isolated human prokineticin 1 and 2 polypeptides that stimulate gastrointestinal smooth muscle contraction, useful for improving impaired gastrointestinal motility in irritable bowel syndrome, chronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2 AVITGACERDVOCGAGTCCAISLMLRGLRMCTPLGREGEECHPGSHKVPFFRKRKHHTCP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                human ZAQL-1 ligand polypeptides, comprising either of two fully defined sequences of 86 amino acids (S1). (I) is ZL1-107 or ZL1-234a produced from hybridoma cells ZL1-107 FERM BP-825 or ZL1-234 FERM BF-8257. (I) is useful for carrying out assay of the polypeptide containing FERM BF-8257. (I) is unvolves reacting (I) with the test-liquid containing the polypeptide or its salt, and measuring the ratio of the polypeptide bound to (I). (I) is useful as a diagnostic or therapeutic agent for diagnosts and/or treatment of diseases uch as endometrial cancer, endometriosis or ovulation disorders, diseases relating to pregnancy, eating disorder, sleeping disorder, seasonal depression, reproductive dysfunction, endocrine disorder, seasonal depression, reproductive dysfunction, endocrine by adjing, cerebral circulatory disorder, head trauma, spinal injury, epilepsy, anxiety, depression, manic depression, schizophrenia,
                                                                                                                                                                                                                                                                                                                                                         The invention relates to a monoclonal antibody (I) having high avidity to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                       monoclonal antibody having high avidity to human ZAQL-1 polypeptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     alcoholism, Parkinson's disease, hypertension, arteriosclerosis, arrhythmia, premenstrual disorder syndrome, glaucoma, AIDS, diabetes, etc. This sequence corresponds to a ZAQ-1 ligand used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 AVITGACERDVOCGAGTCCAISLWLRGLRMCTPLGREGEECHPGSHKVPFFRKRKHHTCP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             24-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     24-JUN-1998
      ö
                                                                          The invention relates to human prokineticin 1 and 2 polypeptides that stimulate gastrointestinal smooth muscle contraction and nucleic acid molecules encoding such polypeptides. Polypeptides of the invention are useful for treating disorders involving impaired gastrointestinal notility. They are useful for trimulating gastrointestinal motility in disorders such as irritable bowel syndrome, diabetic gastroparesis, operational ileus, chronic constipation and gastrointestinal reflux disease. The prokineticin antagonists are useful for inhibiting gastrointestinal motility in conditions of diarrhoea, malabsorptive disorders, inflammatory bowel disorders, infectious disease and intestinal cancers. The antagonists also act as analgesics. The present intestinal cancers.
gastrointestinal smooth muscle contraction, useful for improving impaired gastrointestinal motility in irritable bowel syndrome, chronic constipation.
                                                                                                                                                                                                                                                                                                                       9

The invention provides membrane-bound PRO polypeptides and polynuclectides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful to the preparation of PRO polypeptides, especially by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Membrane-bound proteins and related nucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Smith V,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gurney AL,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 12; Fig 266; 822pp; English.

The specification also describes TANGO 262, TANGO 261, and TANGO 267. TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factorablesion. The proteins can be used to treat any von Willebrand factorablesion. The proteins and provide matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                          hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

AAU1212-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, polypeptides, and to detect the presence of mammalian lung, colon, polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to etimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in proliferation of inner ear utricular supporting cells or of T-proliferation of inner ear utricular supporting cells or of T-proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymoleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated , secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumors e.g. lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  79

WPI; 2001-090793/10. N-PSDB; AAC97496. New isolated nucleic acid for producing a PRO polypeptide, analyzing genetic disorders and treating cardiovascular, endothelial or angiogenic disorders, such as atherosclerosis, wounds or cancer.

Claim 69; Fig 66; 293pp; English.

The invention relates to novel human angiogenesis-associated proteins designated PRO proteins (AABS3064-BS3097), and to nucleic acids encoding to the invention also relates to vectors and host cells comprising a PRO nucleic acid, the recombinant production of a PRO protein, PRO antibodies specific for a PRO protein, fusion proteins compounds which inhibit the expression of a PRO gene. The invention additionally encompasses methods of identifying modulators of PRO capression or activity; diagnosing a cardiovascular, endothelial or angiogenic disorder, or a susceptibility to such a disorder by detecting mutations in a PRO gene, or the expression level of a PRO gene within a cardiovascular tissue; treating a cardiovascular, endothelial or angiogenic disorder via the administration of a PRO protein, propriet or particular tissue; treating a retroviral gene therapy vector comprising a compound of a propertion of a PRO protein, propriet or an agonist; a retroviral gene therapy vector comprising a CRO mucleic acid; and methods of inhibiting or stimulating endothelial cell growth, cardiac hypertrophy or PRO-induced angiogenesis via the administration of a PRO protein, an agonist PRO proteins, PRO cucleic acids, PRO proteins, antibodies adainst PRO proteins, proceeding and propression disorders, such as a therosclerosis, osteoporosis, myocardial infarction, hypertension, cathorneriosis, ulcers, wounds, cancer, Alzheimer's disease, Huntington's endometriosis, ulcers, cancer, Alzheimer's disease, Huntington's

ö
disease, or stroke. PRO mucleic acids are additionally useful in the recombinant production of PRO proteins, as hybridisation probes to screen libraries to isolate cDNAs with sequence identity to PRO proteins, to map genes encoding PRO proteins, to analyse genetic disorders, and in gene therapy. PRO nucleic acids can also be used to produce transgenic animals useful for the development and screening of potential therapeutic agents. The present sequence represents a PRO protein of the invention

The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bloactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF4470 to AAF4470 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAF44687 to AAF44470 sequences, and hopping and in the AAF64270 to AAF64500 represent human PRO polynucleotide and protein sequences and hybridisation probes used in the in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                           PRO polynucleotides used to produce polypeptides used to target bioactive molecules such as toxins, radiolabels or antibodies, to specific cells, to cause targeted cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

for the inhibition of neoplastic cell growth and for treating tumours. The PRO polypeptides can be expressed by standard recombinant methodology. The PRO polypeptides or their agonists are useful for inhibition of neoplastic cell growth and for treating tumours, cancers such as breast, ovarian, renal, colorectal, uterine, prostate, lung, bladder or central nervous system cancers or melanoma and leukemia. The present sequence represents the human PRO1186 polypeptide (encoding cDNA clone ID: DNA60621-1516)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       79
                                                                                                                                                                                                                                                                                       ø
                                                                                                                                                                                                                                                                                                                                                                 The invention provides PRO1186 and PRO184 polypetides that can be used

Endocrine gland-derived vascular endothelial growth factor; EG-VEGF; human; cell proliferation; cell migration; fenestration; cell differentiation; angiogenesis; chemotaxis; endocrine; infertility; fertility; polycystic ovary syndrome; ovarian cyst; cancer; cytostatic; diagnosis; therapy.
The invention provides human extracellular signaling molecules (EXCS) and polymuclectides which identify and encode EXCS. EXCS can be expressed by standard recombinant methodology. The amino acid and nucleic acid sequences of EXCS are useful for diagnosing, treating and preventing infections and gastrointestinal foppic ulcer, dysphagia, pancreatitis, infections and gastrointestinal (beptic ulcer, dysphagia, pancreatitis), cerevological (e.g. epilepsy, ischemic cerebrovascular disease, stroke), reproductive (infertility, ovulatory defects, endometriosis), ancreating cancers (of the breast, adrenal gland, bone). They may also be used to treat fatal familial insomnia, nutritional and metabolic diseases of the nervous system, myopathies, mental disorders (anxiety, schizophrenia, mood), as well as infections caused by parasites (malaria, leishmania, trypanosoma), viral (adenovirus, coronavirus, flavivirus), bacterial (e.g. pneumococcus, staphylococcus, bacillus), and fungal (aspergillus, blastomyces, dermatophytes) agents. The nucleic acids, polypeptides, antagonists, agonists, pharmaceutical compositions, and antibodies may also be used for treating or preventing disorders associated with increased or decreased expression or activity of EXCS. EXCS on the parasity of EXCS. EXCS on the parasity of EXCS. For the parasity of EXCS on the except of the expect on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the disease, to determine presence or excess expression of EXCS, to monitor regulation of EXCS levels during therapeutic intervention, to detect the presence of associated disorders, as targets in microarray, to generate hybridization probes, and to detect differences in gene sequences among normal, carrier or affected individuals. Antibodies may also be used in diagnoshing disorders, in monitoring patients being treated with EXCS agonists, antagonists or inhibitors. Sequences AAB48057-B48082 represent the EXCS of the invention
                                                                                                                                                                                                                                                                                                                           New human extracellular signaling nucleic acids and polypeptides useful for diagnosing, treating and preventing infections and gastrointestinal, neurological, reproductive, and autoimmune/inflammatory disorders.
                                                                                                                                                                                Baughn MR;

The present sequence is that of a novel, tissue-restricted, growth and differentiation factor termed endocrine gland-derived vascular conditions factor termed endocrine gland-derived vascular endothelial growth factor (EG-VEGF). The sequence is predicted from the covarian tissue library. EG-VEGF induces proliferation, migration and covarian tissue library. EG-VEGF induces proliferation, migration and covarian tissue library. EG-VEGF induces proliferation, migration and convariant issue library. EG-VEGF induces proliferation, migration and condition as no effect on a variety of other endothelial and nonconductual cell types tested. The EG-VEGF precursor has a predicted conducthelial cell types tested. The EG-VEGF precursor has a predicted conduction in a flat fold with finger-like projections that act as interactive surfaces. 80% Homology and 63% identity is shown to venom contenting in a flat fold with finger-like projections that act as interactive surfaces. 80% Homology and 63% identity is shown to venom contenting and antagonists, can be used in the treatment of conditions associated with homono-producing tissue, especially ovarian condition may be polycystic ovary syndrome, cancer, especially ovarian condition may be polycystic ovary syndrome, cancer, especially ovarian concer, testicular cancer, prostate cancer or uterine cancer, or ovarian cancer, testicular cancer, prostate cancer or uterine cancer, or ovarian cancer, testicular cancer, prostate cancer or uterine cancer, or ovarian cancer, antagonist to inhibit follicle maturation or ovalation. Methods are claimed for identifying compounds that modulate EG-VEGF cancer or antagonist to inhibit follicle maturation or ovalation. Contained for identifying compounds that modulate EG-VEGF activity. New endocrine gland-vascular endothelial growth factor (EG-VEGF) polypeptides, agonists and antagonists, useful for regulating fertility, and for treating cancer of the reproductive organs, e.g. ovarian or proliferation or survival, to induce chemotaxis, angiogenesis, or differentiation, or to induce endothelial cell proliferation Claim 12; Fig 2; 133pp; English. WPI; 2002-130882/17. N-PSDB; ABA91567 prostate cancer.

The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating a PRO related disorder. The PRO polypeptides are useful for diagnosing tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO polypeptides are useful for stimulating the proliferation of, or gene expression, in pericyte cells, for stimulating the stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. AAU83592-AAU83713 represent human PRO protein sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AVITGACERDVQCGAGTCCAISLMLRGLRMCTPLGREGEECHPGSHKVPFFRKRKHHTCP 79

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABBBB5003. The PRO proteins and polymucleotides have cardiant, cytostatic, antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic artivities, and can be used in gene therapy. The PRO polymucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angiogenesis (such as breast carcinoma and liver carcinoma) and wound analing. The PRO polymucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises a method for producing an active peptide that has the same activity as a ZAQ ligand isolated from eukaryotic cells. The method of the invention is useful for the production of a physiologically -active ZAQ ligand for use in preventing or treating digestive diseases (e.g. colitis and diarrhea). The present amino acid sequence represents a human physiologically active ZAQ ligand-related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         G protein-coupled receptor; ZAQ ligand; physiologically active peptide; ZAQ; antidiarrheic; laxative; drug development; digestive disease; colitis; diarrhoea; constipation; poor-absorption syndrome; gene therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                         The present invention describes a peptide containing an amino acid sequence (I) identical to or substantially similar to that of the sequences in ABB06305 or ABB06306, or its salt. (I) has antidiarrheic and laxative activities. The peptides and encoding DNAs from the present invention are useful for developing drugs to treat digestive diseases like colitis, diarrhoea, constipation and poor-absorption syndrome, including gene therapy. The physiologically-active cows milk-originated peptides are applicable as a specific ligand of brain-originated orphan grotein-coupled receptor protein ZAQ: ABL49615 to ABB40659 and ABB06303 to ABB0631515 represent sequences used in the exemplification of the

New isolated human prokineticin 1 and 2 polypeptides that stimulate gastrointestinal smooth muscle contraction, useful for improving impaired gastrointestinal motility in irritable bowel syndrome, chronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human prokineticin 1 and 2 polypeptides that stimulate gastrointestinal smooth muscle contraction and nucleic acid molecules encoding such polypeptides. Polypeptides of the invention are useful for treating disorders involving impaired gastrointestinal motility. They are useful for stimulating gastrointestinal motility in operational ileus, chronic constipation and gastrointestinal reflux disease. The prokineticin antagonists are useful for inhibiting gastrointestinal motility in conditions of diarrhoea, malabsorptive disorders, inflammatory bowel disorders, inflectious diseases and intestinal cancers. The antagonists also act as analgesics. The present sequence is human prokineticin 1 precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer;

The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arrerial restenosis, theumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Baker KP, Ferrara N, Gerber H, Gerritsen ME, Goddard A;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11-JUN-1998
                                          13-FEB-2003
                                                                                                                               05-NOV-1997
                                                                                                                                                            13-NOV-1997
                                                                                                                                                                          24-NOV-1997
                                                                                                                                             12-NOV-1997
The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in linking a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardiac insufficiency disorders. PRO186, and PRO34, PRO848, PRO848, PRO848, PRO848, PRO848, PRO849, PRO849, PRO849, PRO849, PRO849, PRO849, PRO849, PRO840, PRO941, PRO840, PRO840, PRO941, PRO840, PRO187, Induce c-fos in endothelial cells, and are thus useful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PRO812 inhibits vascular endothelial growth factor (VEGF) stimulated proliferation of endothelial cells and is thus useful for inhibiting endothelial cell growth in mammals which would be beneficial in inhibiting tumour growth. PRO826, PRO186, PRO1184, PRO1346 and PRO1375 stimulate proliferation of
                                                                                                                                                                                                                                                                                                                                                                                stimulated T-lymphocytes and are therapeutically useful for enhancing immune response. PR0828, PR0826, PR01068 or PR0132 enhance survival of retinal neurons cells (PR01132 is also enhances survival/prollferation of rod photoreceptor cells) and therefore are useful for treating retinal disorders of injuries, e.g. retinitis pigmentosum, AMD. PR0819, PR0813 and PR011066 induce prollferation of mammalian kidney mesangial cells, and therefore are useful for treating kidney disorders associated with decreased mesangial cell function such as Berger disease or other nephropathies associated with dermatitis, herpetiformis or Crohn's disease. PR01310, PR0844, PR01312, PR01192 and PR01387 induce the prollferation and/or redifferentiation of chondrocytes in culture and are thus useful for treating sports injuries, and arthritis. This is the amino acid sequence of a novel human PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 AVITGACERDVQCGAGTCCAISLWLRGLRMCTPLGREGEECHPGSHKVPFFRKRKHHTCP 60

## WPI; 2003-341980/32. N-PSDB; ACD24087.

New secreted and transmembrane PRO nucleic acids, for treating inflammation, organ failure, atherosclerbsis, cardiac injury, infertility, birth defects, premature aging, axquired immunodeficiency syndrome (AIDS), or cancer.

## Claim 12; Fig 470; 660pp; English.

The invention describes an isolated nucleic acid (I) comprising, or which has 80 % sequence identity to, or the full-length coding sequence of, one of 275 nuclectide sequences, and which encodes a corresponding polypeptide selected from 275 amino acid sequences, where all sequences are given in the specification. The polypeptide encoded by (I) is used to detect RND polypeptides, link a bioactive molecule to a cell expressing a PRO polypeptide, modulate a biological activity of a cell, stimulate the release of tumour necrosis factor (TMF) alpha from human blood, modulate to the uptake of glucose or free fatty acid by cells, stimulate the release of colls expression, stimulate the release of proteoglycans, stimulate the release of cytokine to from peripheral blood mononuclear cells, inhibit the binding of A-peptide coff and polypeptide encoded by it, are useful for treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome (ADDS), cancer, or diabetic complications. The nucleic acid is useful as hybridisation probes, in chromosome and gene mapping, and in generating consistences RNA or DNA. The polypeptides are useful as pharmaccuticals, diagnossics, biosensors or bioreactors. Both are useful in tissue typing. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide.

```
New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, as chromosome markers, or in generating probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2003-288106/28.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-PSDB; ABX90338.

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynucleotides are useful for preparing a medicament useful in the diagnosis and treatment of tumours. Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABUS0739-ABUS0860 represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New genes, and its encoded secreted and transmembrane polypeptides, useful for stimulating Tumor Necrosis Factor alpha, or chondrocyte or pericyte proliferation, especially for treating lung tumors, arthritis or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention discioles isolated rate secretes. Candemizate polypeptices comparising a sequence without signal peptide and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. The PRO polypeptides or polymouclectides are also useful in gene therapy, in chromosome cidentification, as chromosome markers, or in generating probes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides are useful in diagnostic assays for issue typing. Anti-PRO antibodies are useful in diagnostic assays for natural sources. The sequences presented in ABU60478-ABU60624 are the PRO polypeptides of the invention of PRO from recombinant cell culture or natural sources. The sequence data for this patent is also available in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-DEC-1998
The invention describes an isolated nucleic acid molecule comprising a sequence with at least 80% identity to: (a) a nucleotide encoding any of sequence with at least 80% identity to: (a) a nucleotide encoding any of 122 PRO (secreted and transmembrane) polypeptides whose sequences are fully defined in the specification; or (b) any of 122 nucleotide expension or the full length coding sequence of any these 122 nucleotide sequences. The PRO polypeptides or polynucleotides are useful concludarly useful for detecting tumours or plynucleotides are useful as pharmaceuticals, diagnostics, blosensors or bloreactors. These are comparant to retain the properties of TNF-alpha from human blood, in a mammal, for stimulating the release of TNF-alpha from human blood, or cells, for stimulating proliferation of pericyte cells, or for modulating commal human dermal fibroblast proliferation. The PRO nucleic acid or polypeptide is also useful for treating tumours or various bone and/or cartilage disorders (e.g. sports injurance or various bone and/or cartilage disorders (e.g. sports injurance or arthritis), or wounds. The PRO polypeptides are useful in drug screening, particularly as targets of the therapeutic intervention in these diseases, and in the diagnostic contentiation of the presence of these diseases. The PRO polypeptides are also useful as molecular weight markers, or for chromosome contenting libraries of human DNNA, genomic DNA or mRNA. The PRO genes may also be used in agene therapy, particularly for replacing a defective consequence of a novel human secreted and contents membrane PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                20 AVITGACERDVQCGAGTCCAISLMLRGLRMCTPLGREGEBCHPGSHKVPFFRKRKHHTCP 79

The invention relates to an antibody that binds essentially to the epitope of endocrine gland-derived vascular endothelial growth factors (EG-VEGF) and is selected from anti-EG-VEGF monoclonal antibodies 1C6, 2A3, 2A8 and 4H9. The composition and methods are useful in regulating cellular proliferation and chemotaxis, e.g in treating conditions associated with hormone-producing tissue such as congenital adrenal hyperplasia, sexual maturation, precocious pubberty, McCume-Albright syndrome, hypogonadotropic hypogonadism, ovarian cyst, cancer such as androgen-dependent cancer or infertility. The present sequence represents the amino acid sequence of human endocrine gland-derived vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 AVITGACERDVQCGAGTCCAISLWLRGLRMCTPLGREGEBCHPGSHKVPFFRKRKHHTCP 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New anti-endocrine gland-derived vascular endothelial growth factor monoclonal antibodies 1C6, 2A3, 2A8 or 4H9, useful for regulating cellular proliferation and chemotaxis.

polypeptides, and the polynucleotide sequences encoding them. The PRO
polypeptides are secreted and transmembrane proteins. The PRO
polypeptides are useful for detecting other PRO polypeptides, for linking
polypeptides are useful for detecting other PRO polypeptides, for linking
bloactive molecules to cells expressing PRO polypeptides, for modulating
conforming PRO polypeptides are useful as hybridisation probes, in
chromosome and gene mapping, in the generation of antisense RNA and DNA,
in the preparation of PRO polypeptides, for generating transgenic animals
con knockout animals, to construct hybridisation probes for mapping the
conforming mith genetic disorders, in gene therapy, for chromosome
conforming mith genetic disorders, in gene therapy, for chromosome
cidentification, as chromosome markers, and for generating probes for PRO
ABU14006 represent the human PRO polypeptides of the invention. Note: The
sequence data for this patent was obtained in electronic format directly
from the USPTO web site at seqdata.uspto.gov/psipsDIDEntry.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 AVITGACERDVQCGAGTCCAISLWLRGLRMCTPLGREGEECHPGSHKVPFFRKRKHHTCP 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the isolation of novel human PRO polypeptides, and the polynuclectide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynuclectides are useful for preparing a medicament useful in the treatment of diabetes, bone and/or cartilage disorders (e.g. rheumatoid arthritis, sports injuries, osteoarthritis), obesity, hyper- or hypo-insulinaemia, hearing loss, and coagulation disorders (e.g. stroke, heart attack). Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABUS0870-ABUS1144 represent the human PRO polypeptides of the invention. ```
encodes a Zvenl polypeptide. (I) is useful for inhibiting the proliferation of tumour cells, as probes or primers to clone 5' noncoding regions of a Zven gene, to direct the expression of heterologous gene in tissues of, for example, transgenic animals or patients treated with gene therapy, to detect the expression of a Zvenl or Zvenl gene in biological sample, to detect activated neutrophils, to identify therapeutic or prophylactic agents that medulate the response of a neutrophil to a pathogen, to determine whether a subject's chromosomes contain a mutation in the Zven gene, or to detect aberrations in Zvenl or Zvenl locus. (I) is useful as educational tools, as laboratory practicum kits for courses related to genetics and molecular biology, protein chemistry and antibody production and analysis. The present sequence represents the amino acid sequence of ZVENZ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted and transmembrane protein; cytostatic; anti-HIV; virucide; hepatotropic; antiinflammatory; neuroprotective; gene therapy; yets); pharmaceutical; diagnostic; biosensor; bioreactor; malignancy; cancer; covarian cancer; colorectal cancer; Kaposi's sarcoma; leukaemia; lymphoma; hepatitis B; multiple sclerosib; Crohn's disease;

Sequence 6872, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHIGNS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT APPLICATION NUMBER: 60/29/99,016

CURRENT APPLICATION NUMBER: 60/29/768

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 3,

                                                                                                                                                                                                                                                                       -!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed in the steroidogenic glands, ovary, testis, adrenal and placenta.
-!- SIMILARITY: Belongs to the prokinecitin family.
                                                                                                       Protein Sci. 13:2819-2824(2004).

-!- FUNCTION: Potently contract gastrointestinal (GI) smooth muscle. Induces proliferation, migration and fenestration (the formation of membrane discontinuities) in capillary endothelial cells derived from endocrine glands. Has little or no effect on a variety of other endothelial and non-endothelial cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

                                                                                                                                        -!- FUNCTION: May function as an output molecule from the suprachiasmatic nucleus (SCN) that transmits behavioral circadian rhythm. May also function locally within the SCN to synchronize output. Potently contracts gastrointestinal (GI) smooth muscle (B)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 AVITGACERDVQCGAGTCCAISLWLRGLRMCTPLGREGEECHPGSHKVPFFRKRKHHTCP

-!- TISSUE SPECIFICITY: Expressed at high levels in testis and at lower levels in brain, lung, ovary, spleen, thymus and uterus.
-!- INDUCTION: Activated by CLOCK and BML1 heterodimers and light; inhibited by period genes (ERI, PER2 and PER3) and cryptochrome genes (CRY1 and CRY2) (Probable).
-!- SIMILARITY: Belongs to the prokinecitin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Protein Sci. 13:2819-2824(2004).

-!- FUNCTION: May function as an output molecule from the suprachiasmatic nucleus (SCN) that transmits behavioral circadian ruptum. May also function locally within the SCN to synchronize output. Potently contracts gastrointestinal (GI) smooth muscle.
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GO:0005576; C:extracellular; TAS.
